SCI Record Book policy states that only the method of take used to kill the animal should be recorded on the entry. If a firearm is used in conjunction with an alternative method, the "rifle" category should be selected. For example, when taking alligator with an alternative method, if a firearm or bang stick is used to deliver the coup de gras, the method of take will be certified as a rifle entry.

**METHOD 50-T**  
**ENTRY FORM**  
 For all species of Wild Turkey  
 with single beard

**Measuring A Wild Turkey With Single Beard**

All measurements on the Turkey are done in 1/16 increments. The SCI measuring system does not include the weight of the turkey when calculating the final score, weight can not be re-measured and therefore is listed as supplemental information.

**Measuring the Spurs:** Both the right and left spurs are measured. The measurement should begin at the center point of the spur that has been dissected off from the leg at a 90 degree angle to the base of the spur. Hold the cable tightly and continue measuring by following the curvature of the spur to the tip. This measurement can be taken from the left or right side of the spur; however, it may not be taken from the top or the bottom of the spur. The measurement will be multiplied by 10 to establish the total score of each spur.

**Measuring the Beard:** A beard must be measured from the base (thickest area attached to the chest) to the tip or longest feather in the beard. Use a multiplier of 2 (ex: 8-8/16 x 2 = a total score of 17) to receive the total score for the beard.

Add together the total points of the spurs, and length of the beard.
